Hevi

Doaa

Problems

- ✗ Group orders are missing a clear management system
- ✗ Dividing order bills and collecting payment
- ✗ Engaging with delivery driver.

Solution

- ✓ Implement a social system that facilitates group ordering.
- ✓ Provide bill splitting feature supported with automation system to collect money.
- ✓ Provide communication features with the delivery driver.

Team members

- **Sundos Jamil** UX/UI designer
- Kholoud Alharbi UX/UI designer
- Amr Ahmed UX/UI designer
- Mohamed Elaref Supervisor

My roles

- User Research
- Information architecture
- Design system
- User Interface

Tools

- Figma
- Figjam
- Google Suite
- Zoom Meetings

Project Scope

Scope description

Enhance the user experience when ordering meals from the mobile app, and focusing on group orders

Platforms

IOS Platform

Deliverables

- Final report of user research
- Build a User journey map
- Identify gaps in the market and identify competitors
- All-screen design that makes the user experience easy and valuable for users
- Building a principled design system

Constraints

- The project time period is relatively short
- The team is at the beginning of its career
- Low Budget

How we start from nothing to solution

This project journey runs a series of UX phases from uncovering the problem to finding a solution focussing on a group ordering user-centered approach

User research

How did we reach a larger audience? (survey)

First, a total of 128 individuals were surveyed to gather extensive insights into the needs, pains, and common impressions of the target audience.

Gender

Age

Uses a Mrsool application

Usage times

Problems occur

Attention to reviews

How did we know more user needs ? (User Interviews)

We interviewed 24 food delivery app users to gather insights into their challenges, needs, and experiences ordering through Zoom.

Order alone

Order with team

Order with family

The questions we asked during the interviews based on the research objectives were:

Objective 1: Understanding User Interaction with Group Ordering

Q1. Do you order at work only, or do you order with your family also?

Q2. Do you order at work only, or with your colleagues?

Q3. Are you the one handling the food ordering or it's someone else?"

Q4. How is food ordering process coordinated between you and your friends?

Objective 2: understand user challenges with payment methods

Q1. How payment process managed between you and your colleagues?

Q2. Did you face any challenges with group ordering?

Q3. How payment process managed between you and your colleagues?

Objective 1: Understand full user journey while placing a meal order within the application

Q1. When was the last time you ordered from Marsool app?

Q2. Tell me more about last order experience?

Q3. What is your favorite advantage in Marsool?

Q4. What is the most frustrating you when ordering from Marsool?

Users insights from user interviews

“Honestly, Marsool has everything, but my issue with it is the delays and also the prices higher compared to other apps”

“Feeling frustrated due to the inability to communicate effectively with the delivery driver”

“Honestly, Marsool has everything, but my issue with it is the delays and also the prices higher compared to other apps”

“Feeling frustrated due to the inability to communicate effectively with the delivery driver”

“Feeling frustrated due to the inability to communicate effectively with the delivery driver”

The questions we asked during the interview based on the research objectives were:

Objective 1:
The concept of success
from stakeholder
perspective

Q1. What would
success look
like for this
project?

Q2. What are
the potential
risks for this
project?

Objective 2:
Understanding short
and long terms goals

Q1. What are the
Project goals for
the short and
long run?

Q2. What should
this project
achieve for the
business?

Q3. What is the
business impact
if the project
fails?

Objective3:
Identifying current or
potential obstacles and
concerns facing the product

Q1. What actions
we want users
to take?

Q2. If the user has
a desire to make
any changes to
the product, what
would that be?

Q3. What are
the biggest
challenges for
the product
today?

Objective 4:
Identifying the
competitors

Q1. What are the
similar
competing
applications that
people use?

Q2. What are
strengths and
weaknesses of
these competing
applications?

Q3. What are
the biggest
challenges for
the product
today?

Q4. Can you
describe the
core value that
our product
provides?

Objective 2:
Understanding the
target audience

Q1. Who are the
primary users?

Q2. What is the
special theme of
our customers?

Q3. What defines
a successful user
experience?

How did we get to know more about the market? (Competitor analysis)

We studied the market, analyzing six competing applications to identify strengths, weaknesses, opportunities, and threats.

	 MRSOOL	 HUNGER STATION	 jahez	 Careem	 TO YOU	 THE CHEFZ	 talabat
Restaurant Diversity	 Medium	 High	 High	 Medium	 Medium	 High	 High
Delivery Speed	 Low	 Medium	 Medium	 Medium	 High	 High	 Medium
Free Delivery		 Medium	 Low	 Low	 Medium	 Medium	 Low
Subscriptions	 Low	 High	 Medium		 High		 High
Order Tracking	 Medium	 High	 High	 Medium	 High	 High	 Medium
Real-time Order Tracking		 High	 High	 Medium	 High	 High	 Low
Delivery Fees	 Low	 High	 Medium	 Medium	 High		 Low

How did we define our target audience? (Persona)

After analyzing the data, the target audience for the persona has been identified, represented by Razan Khalid.

Razan Khalid

Age: 23

Marital Status: **Single**

Job title: **Programmer**

Location: **Riyadh, Saudi Arabia**

Passionate and inspirational programmer, specialized in software development, seeking continuous development and always ready to help others.

Personality

Goals

- Ease and smoothness of use
- fast delivery
- Low Cost Delivery
- Managing group orders

Needs

- She needs a mechanism to manage group orders and collect money.
- She needs to check user reviews, to know the quality of the meal.
- She needs an order tracking system after completing her order
- She needs to know delivery location for her order

Motivators

- Fast delivery motivates her to order
- offers and discounts encourages her to order.
- providing customer review encourages her to Order.
- Restaurants variety and Updated Menus encourage her to Order
- Clear images and detailed information about the meals motivate them to order

Pain Points

- Uncertainty about the meal's portion size and the number of servings.
- The high cost of Marsool delivery makes ordering very hard.
- Lack of communication in group ordering in Marsool App.
- Hidden costs that increase the total price can be overwhelming.

How we deep dive into Razan's mindset? (Empathy map)

Emotions, thoughts, actions, and words have been identified for Razaan Khalid.

Say

I am encouraged to order in case of restaurant variety and updated menus

When there is fast delivery, this encourages me to order

Looking for users reviews before ordering

I am encouraged to order if there is offers or discounts available

I hope there is meal schedule for the next period of time.

I am having problems with not being able to modify the order immediately after placing it.

I hope there is a mechanism to manage group orders and collect money.

I want to know where my order arrived.

Think

I hope I find enough pictures and information about the meals, not like every time.

I would like to see the opinions of previous users before I ask.

I hope I find enough pictures and information about the meals, not like every time.

I hope I find enough pictures and information about the meals, not like every time.

I hope I find enough pictures and information about the meals, not like every time.

I hope I find enough pictures and information about the meals, not like every time.

I hope I find enough pictures and information about the meals, not like every time.

Do

Before ordering, searching for reviews from previous users.

I am Order when there is a variety of restaurants and menu updates.

I am using STC PAY and other bank accounts to pay food money.

contacting delivery agent to know the status of the order

I start the order and handover my phone for my colleagues to order their meals.

After group ordering, I compile the orders and try to figure out who ordered what.

Before ordering, search if there is offers and discounts."

Feels

feeling Misleading by adding hidden fees to the order price

Frustrated by the inability to schedule orders for a period of time.

feels confident when reviewing other user reviews

feel confused if she didn't know the status of the order

feeling depressed while group ordering and collecting money.

feels satisfied if there is variety restaurants and updated menus

Fear to pay using Visa, as the delivery prioritize cash payments.

Frustration from my inability to modify the order.

How did we organize user needs? (Affinity map)

User needs are arranged under six main sections to understand how the elements relate to each other.

Group order

Feeling disappointed by his work colleagues because they ordered without him while he was in a meeting.

Annoyed of not having the option to order from multiple restaurants and have them delivered by one delivery agent.

In group ordering, each person chooses a different restaurant, which causes a problem in delivery and payment.

Group order mechanism

Order control

The order cannot be edited immediately after placing it, nor can any item be added or removed.

Inability to order meals and schedule orders for the upcoming period of time.

I can't customize the order, meaning for example I want to specify the number of cookies or pastries of each type, but I can't do that, it's easy if I'm at the store.

Payment and Collection

Fear to pay using Visa, as the delivery prioritize cash payments.

I prefer to use cash payment when receiving an order.

Difficulty in calculating money for each order participant

After the group order, I receive my money through STC Pay.

Delivery

The order arrives in bad condition due to poor delivery methods, improper packaging, or incorrect items.

Marsool doesn't provide me with a map where I can track my order, and there's no progress bar.

Frustrated that Marsool not pay any attention to orders notes written by the customer.

Changing the delivery cost according to the driver's estimate.

Privacy

Upset because in group orders, the phone will be handed over to all colleagues to order their meals.

Upset that my phone number appeared to delivery agent in Marsool app.

Meal details

Not knowing the exact size of the meal sometimes large or too small, and don't know it will be enough for how many individuals.

Before ordering a meal from a restaurant, she needs to check user reviews.

Taking time and effort to search for food with specific specifications, such as healthy food.

How did we define the user journey? (user journey map)

We have mapped out the user journey and goals with the Mrsool app from Explore to delivery.

Phase	Explore	Compare	Negotiate	Select	Delivery
Actions	- Looking for offers - Explore the list of restaurants - Get the best offers.	- Comparing the delivery speed between applications. - Comparing offers and delivery prices between competing applications. - Comparing meals on delivery apps versus real restaurants.	- Searching for reviews from previous users. - Consulting with colleagues to choose the type of food. - Choosing the restaurant based on ratings.	- Choosing the restaurant based on offers and discounts. - Customizing the order based on what I want. - Choosing the restaurant based on the variety of meals in the menu. - Searching for pictures and information about the meals. - Using the STC Pay application and bank accounts to send payments to my colleagues. - I choose based on suitable delivery prices.	- Tracking the order via a progress bar. - Tracking the order on the map. - I communicate with the delivery driver to know the status of the order. - Ensure that the order is correct and accurate. - I contact customer service when there is an issue.
Goal & Experiences	- Find diversity in restaurants - Find my favorite restaurant	- Access to the best delivery price. - Getting the most diverse range of restaurants in one app.	- Having reviews from previous users. - Agreeing on the type of food everyone wants. - Providing reviews for the restaurant.	- Access the best offers and discounts. - Knowing the opinions of previous users to choose the best meal. - Collecting money from group orders.	- Knowing the status of the order. - Ease of communication with the delivery agent. - The arrival of the order is correct and in good condition.
Feelings & Thoughts	 Feeling confused searching for his favorite restaurant Excited to get best offers Frustrated due to delivery high fee, and Delay Satisfied that HungerStation easier to use Frustration as there is no user reviews Annoyed by difficulty to agree on one decision Annoyed by deleting his order, Deleting his order mixed up Excited when there is offers and discounts Feels more confident when checking users to know meal quality Frustrated of not being able to track the order in the map Excited of fast delivery service				
Pain Points	- Difficulty reaching the desired restaurant, due to the large number of restaurants and difficulty of searching. - Offers are available on a small category of restaurants	- Difficulty of accessing restaurants. - The delivery fee is high - Lack of variety restaurants. - The menus in the app are incomplete. - The delay in delivering orders.	- Lack of availability of reviews from previous users. - Difficulty in agreeing on one decision.	- Inability to manage group orders. - Difficulty in collecting payments. - Lack of clear information and pictures about the meal. - Reviewing user feedback to evaluate the quality of the meal. - Not knowing the exact size of the meal and how many people it serves. - Delivery costs are unreasonable.	- Inability to track the order on the map. - Difficulty in communicating with the delivery person to know the status of the order. - The order arrives incorrectly. - The order arrives unsound due to poor delivery or packaging.

How did we identify problems and create solutions? (HMW)

We identified all the **problems** that appeared to us in user research, then used the **HMW** method to find solutions to the problems and then chose the best **solutions**.

Issues

HMW's Questions

Features

How did we design ideas for the feature list? (Crazy 8's)

We used method Crazy 8's with the goal of drawing 8 sketches for each feature quickly and efficiently.

How did we find the best information architecture? (Card sorting)

Card sorting was done with 13 participants to find the best way to organize information for easy browsing.

Restaurants

- Mexican restaurants
- Egyptian restaurants
- Indonesian restaurants
- Healthy restaurants
- Vegetarian restaurants
- Seafood restaurants
- International restaurants
- Lebanese restaurants
- American restaurants
- Italian restaurants
- Japanese restaurants
- pastries
- dessert
- Salad
- bakery
- Grilled
- Falafel
- Sushi

Pharmacies

- Pharmacy
- Health, beauty, care
- Baby supplies
- Medical glasses
- Perfumes

Account

- Coupons
- payment methods
- Corporate offers
- Subscriptions
- Invite friends
- Bills
- Donate a meal
- Settings
- Connect us

How did we know the sections within the app? (Site map)

After the card sorting results, we made a map of all the main and sub-sections of the app and chose the names of the labels.

How did we define user navigation within the app? (User flow)

We set User Flow for the group orders feature within the application.

How did we converted user flow to low fidelity wireframes? (Wireframes)

In this phase of the project multiple wireframes were created to serve Group ordering purposes.
